Professional Summary

U.S. Navy veteran with eight years of experience leading teams and supporting mission-critical operations in fast-paced, high-pressure environments, now transitioning into IT. Building hands-on technical skills in Windows Server, Active Directory, PowerShell, and Hyper-V through the Microsoft Software and Systems Academy (MSSA) lab-based training program. Holds an Associate of Science in Computer Technology and is pursuing a Bachelor's Degree in Information Technology at the University of Washington Tacoma. Active Secret security clearance. Seeking a IT Support / System Administrator role where I can apply strong communication, troubleshooting, and leadership skills while continuing to grow technically.

Education & Certifications

Associate of Science in Computer Technology, American Military University	Earned Dec 2025
Microsoft Software and Systems Academy (MSSA), Server & Cloud Administration	Expected Dec 2026
Microsoft Certified AZ-900: Azure Fundamentals	Expected Apr 2027
Bachelor's Degree in Information Technology, University of Washington Tacoma	Expected Dec 2028

Key Qualifications

Windows Server 2025 | Active Directory | PowerShell | Hyper-V | DNS/DHCP | Windows Admin Center | Microsoft 365 | Technical Troubleshooting | Communication | Team Leadership | Technical Documentation | Operational Readiness | Active Secret Security Clearance | Artificial Intelligence Scripting

Professional Experience

Microsoft Software and Systems Academy (MSSA), Remote **Aug 2026 – Dec 2026**

Participant, Server & Cloud Administration (Intensive Training Program)

Intensive 17-week, instructor-led Microsoft program for transitioning service members, focused on Server & Cloud Administration. Hands-on labs build practical skills in Windows Server 2025, Active Directory, Microsoft Entra ID, PowerShell, Hyper-V, and enterprise networking, with an emphasis on documentation and troubleshooting.

- Deployed and configured Windows Server 2025, Server Core, and Hyper-V virtual machines, including storage and failover clustering, using Windows Admin Center and PowerShell, resulting in a functional, highly available lab environment.
- Configured Active Directory, Microsoft Entra ID, DNS, DHCP, Group Policy, IPAM, and IPv4/IPv6 networking using Windows Admin Center, resulting in centrally managed lab servers, users, and resources.
- Wrote and tested PowerShell scripts to manage services, gather system information, and perform Active Directory tasks.
- Completed hands-on labs in network security, user access management, backup and recovery, and high availability using Windows Server tools, resulting in practical experience protecting and restoring lab environments.
- Documented lab builds and troubleshooting steps using Git, GitHub, and Visual Studio Code, resulting in a version-controlled record of my work that supports collaboration with classmates and can be reviewed by hiring teams.

U.S. Navy – Naval Magazine Indian Island (NMII), Port Hadlock, WA **Aug 2023 – Dec 2026**

Emergency Operations Center (EOC) Manager/ C-small Unmanned Aircraft Systems Team Lead

Responsible for emergency operations, installation security support, and EOC technology at Naval Magazine Indian Island. Led a six-person counter-drone team, maintained emergency notification systems, provided first-level IT troubleshooting, and supported the Installation Emergency Manager during real-world and simulated emergencies.

- Led a team of six personnel operating the NINJA counter-drone threat-detection and sensor platform (C-sUAS) to detect and deter unauthorized drone activity in restricted airspace, supporting installation security and protecting critical assets, resulting in enhanced airspace security.

- Coordinated a continuous 24/7 watch schedule using Excel and Microsoft Teams to assign adequate staffing, resulting in uninterrupted mission coverage.
- Developed and delivered training on C-sUAS hardware for 20 personnel to improve proficiency, procedural compliance, and readiness, resulting in the qualification of 14 additional employees.
- Maintained the installation's mass-notification and emergency broadcast systems (AtHoc and Giant Voice) to support all emergency notifications, resulting in timely alerts to installation personnel.
- Troubleshot 8 computers, 5 monitors, 1 printer, and various telecommunications devices using operational procedures and diagrams to minimize disruptions, resulting in greatly reduced downtime.
- Analyzed and improved security department administrative processes by creating a work tracker via Excel, resulting in streamlined daily operations and accurate documentation.
- Assisted the Installation Emergency Manager in supervising the Incident Management Team during real-world and simulated emergencies, including earthquakes, floods, and spills.

U.S. Navy – USS Nimitz (CVN-68), Bremerton, WA **Aug 2018 – Aug 2023**

Tactical Air Controller / Radar System Operator

Responsible for operating radar and communication systems aboard a nuclear-powered aircraft carrier, tracking air and surface contacts, and relaying accurate, real-time information to commanders while supervising and training junior personnel.

- Tracked aircraft, ships, missiles, and natural objects using Ship Self Defense System (SSDS) to support senior-level decisions, resulting in accurate situational awareness for safe mission operations.
- Evaluated radar data and relayed timely information to decision-makers using SSDS, resulting in informed decisions in rapidly changing environments.
- Supervised and trained 28 junior personnel in radar operations and electronic systems through hands on training, resulting in improved team readiness.
- Coordinated between personnel and supporting units using radiotelephones and multiple communication systems, resulting in accurate, timely communication under pressure.
- Conducted combat air traffic control and advised leadership on aircraft capabilities, limitations, and threats using SSDS and external communication systems, resulting in zero aircraft mishaps.
